

Function 8 of team F

Mohammad Jafar Mohammadi

July 2019

The domain of the function is the double values of two arguments that can be passed to the function , this function will return the reflex of the point which is the pair of the passed arguments. This function will not accept any polynomial arguments and will not do any operations of that kind on the given inputs.

the given values are of type double which of course include integers as well. The co-domain of this function includes the functions which need it in their calculations which could be in Cryptographic algorithms such as ECSA or ECDSA.
